

EPIC EMR Expedited Implementation Puts Clinical Research on the Fast-track

BEKHealth worked with a major hospital network to quickly and collaboratively implement an EPIC EMR technology solution to set them up for streamlined feasibility and patient identification for ongoing clinical research.

Clinical Research Solutions

The Problem

Implementing new solutions into an already robust tech stack can be a headache for clinical staff, especially when a product adds more tedious work to their responsibilities. Furthermore, competitor products require a significant reliance on custom queries, wasting valuable time and offering more potential for bugs throughout the process. This added time can delay the go-live date of a study by months, even by more than a year depending on the size and nature of an engagement.

Our Approach

The BEKHealth system of products was built from the ground up to not only be incredibly powerful, but also easy to implement. Each product seamlessly configures into any major EMR system, such as EPIC, and we have several supplemental guardrails built-in to ensure minimal interruption upon commencement. The BEKHealth tech and clinical teams worked hand-in-hand with the partner to go live in a matter of weeks. Where competitor projects may take hundreds of additional labor hours, the BEK team only needed 6 to go live. With our products and team ready to roll, we were able to save the client trial several months of unnecessary implementation time.

“This is a very selective and cutting-edge trial. Prior to this, we had been unable to find any patients who qualified... thank you!”

Director, Oncology Clinical Research

Our Results

6

The project was ready to launch in **six weeks**, a timeline that can typically take 9-12 months.

5

Within **five hours** the BEKHealth products were integrated within the site's existing stack, as compared to hundreds of hours from competitor products.

10+

They were able to identify **more than 10** qualified patients in 3 weeks, inviting 3 to participate. The previous 2 years netted zero patients.
